After Operations:

1. All extraneous debris, scrap metal, wood, and unuseable buildings will be buried or removed from the property.

3. Quarry benches will be backfilled with stockpiled overburden and spoil material to reduce highwalls and achieve a stable near-natural slope.
4. The disturbed surface areas will be regraded, covered with stockpiled topsoil and surficial material suitable as a growth medium, and seeded with a diverse species mixture.
5. Regeneration will be monitored for three growing seasons and reseeded if necessary.

Reclamation performance surety will be established upon final approval of the mining and reclamation plan.
